Setup Instructions
DO NOT REMOVE COVER UNTIL UNIT IS IN PLACE

For help between the hours of 8am – 5pm, Monday – Friday call 812-855-7832

1. Plug in the TV cart and make sure the power strip is turned on.
2. Turn on the TV by pressing power on the right hand side (if facing back of TV). The small triangle on the front of the TV will glow white if powered on.

3. Make sure it is on the correct input:
   - If using a laptop with VGA connections, change TV input to PC-In
   - If using HDMI, change TV input to HDMI 1

To view external source images, select the input source by pressing INPUT on the remote control unit or on the TV.

Example:

1. Press INPUT.
   - The INPUT list screen displays.
2. Press 11 or 4 to select the input source.
   - You can also select the input source by pressing INPUT.
   - Each time INPUT is pressed, the input source toggles.

   PC-In ——> HDMI2 ——> HDMI3

   HDMI2 ——> HDMI3 ——> HDMI4

   An image from the selected source automatically displays.

   If the corresponding input is not plugged in, you cannot change the input. Be sure to connect the equipment beforehand.
Audio Playback

1. For Audio turn on the sound bar located below the TV. To do so press in on the Power button (2).

2. Make sure the input is optical. If you need to change the input use the input selector (2) and change it to Optical. The display panel (3) will show what input is selected.

3. To change the volume on the sound bar use the volume knob (4). The panel (3) will display the volume level. It will say “Max” when you’ve reached the max volume. Make sure that the volume on your laptop is turned up all the way to get the most volume.

4. If using VGA plug the audio cable attached to the VGA into your laptop headphones/speaker port. If using HDMI you will not need another cable.
